THE CARE THAT GOES INTO SOIL PREPARATION

Sugar beets, flax, vegetables for canning, cereal crops, seed potatoes etc. The agricultural cooperative crops of Philippe Heusele at Chauconin Neufmontiers (Seine-et- Marne) deserve every possible care at the seedbed stage.

For a cultivator, this farmer chose the Franquet Combigerm.

"It was mainly the soil preparation constraints for seed potatoes which led us to choose this implement. Its straight, rigid teeth allow us to prepare up to 20cm depth of soil, retaining a good volume of fine earth at the same time. What is more, the Combigerm does not lift the clods", explains Philippe Heusele.

For sugar beets, flax or canning vegetables, the spring crops, the implement is adjusted to work more on the surface. But it gives complete satisfaction. *"Between the spire roller's settling action, the soil pulverisation by the teeth and then the levelling and settling of the surface by the small diameter Crosskill rollers, the Combigerm guarantees precise soil preparation without taking too much traction power."*

On his 409 hectare agricultural cooperative, Philippe Heusele has chosen a 4-metre Franquet Combigerm for its versatility and precision.
